

WBHOA

Pedestrian Access to and from Westford Bridge

1. Pedestrians wishing to visit a resident should press the house number of the resident on the control panel. This will activate a self-dial to the resident's telephone number who upon identifying the visitor will press **6** on his telephone keypad to activate the opening of the gate. The gate will automatically close after your visitor has entered.
2. To exit, your visitor must be in possession of the five-digit code number that will be changed on a monthly cycle. This number should be entered into the small panel mounted on the right hand side of the drive some five metres from the security gate. This will activate the gates to open allowing your visitor to exit and the gate will close automatically behind them.
3. Absent residents who wish to allow an unsupervised visitor to their premises are requested to make arrangements with a resident to open the gates on the visitor's request. This will ensure that no unauthorized person will be on the premises and all our recognized visitors will be in possession of the exit code.

To maintain security at a high level all visitors should enter using this authorized method of entry.
