

Update

18th June, 2017

To all of you who shared the passion for our nature reserve

Sadly, other than the indigenous forest and some of the re-growth from the previous “controlled” burn, there is nothing left. It is a veritable desert, from one end to the other, as the pics below will show.

Gone are the trees, fynbos, walking trails, benches, and of course the wildlife. Yet amongst all this, a few tiny green shoots are starting to appear, against all odds. Hope springs.

Regards

Dion Gaylard
